Wholesalers of HVAC Controls and Solutions since 1945

Advanced Rooftop Control

Featuring the Schneider SE8600 and Danfoss MicroDrive

7/11/18 12:30 – 4:30pm

Please join us for a 4 hour discussion of flexible stand-alone devices that can be used to improve comfort, control, and efficiency at the zone or room level. The focus is on improving equipment operation using the flexibility and processing power of the local devices rather than depending on a network or supervisor for intelligent control. Both the SE8600 Thermostat and MicroDrive are application-specific devices, meaning they work well with a specific application out of the box. Both also offer flexibility with internal logic that can be adjusted or configured to meet the requirements of each application. This class will cover real applications of these devices, including advanced RTU retrofits.

TIME	TOPIC	DESCRIPTION
12:30	Danfoss Micro-Drive & RTU Drive	Introduction & Demonstration of typical startup of pre-programmed RTU drive. Demonstration of RTU-Drive operation & discussions of savings, opportunities, etc.
1:30	Schneider SE8600 & Advanced RTU	Introduction of hardware, walk through menu structure. Discussion of advanced RTU Controls & Approach.
2:30	Flexibility	In what ways are the MicroDrive & SE8600 flexible in their application? Discussion of universal outputs & Lua programming on SE8600 as well as 2 speed/ 3 speed/ Variable Speed on Micro-Drive
3:30	Application Examples & Networking Options	Discussion of multiple real-world applications of advanced stand-alone controls – Units with modulating heat and cooling, Fan Coil Units with pressure-independent fresh air control, etc. Plus, discussion of available wireless networking & front-end options.

Let us know if you are interested in this class but cannot attend this day or time. You must pre-register for this free class. If the class is not full we may reschedule.
